Incident events:

Truck driver was approaching an intersection controlled by traffic lights, on approach the lights changed from red to green and driver proceeded into and around corner. This intersection has been identified as having an off camber. As the combination proceeded around corner in a loaded capacity and at a slightly elevated speed to make it through the green traffic light – the lead trailer lost connection with the road and tilted over on its side releasing product and fuel to ground. *Road conditions together with drivers' decision making need to be carefully considered for all road operations. Equipment and environmental impacts depend on it. If in doubt – STOP – a little time can save a life.*

Last month, two separate trucks contacted a light vehicle during lane changing and exiting a driveway. Both drivers did not identify that a light vehicle was in the direct vicinity of their prime mover and trailer. *Please ensure when selecting a suitable eatery that it supports access of a heavy vehicle. When changing lanes always look and look again to ensure a safe movement can be achieved.*

A driver departed the grid at Ingham's with an elevated trailer. During the movement, the driver swung the combination out and in doing so the front of the dog trailer contacted an overhead powerline. A large arc of power was released which resulted in a loss of power to the site for a period. The driver failed to identify that contact had been made at the time and exited the cab – *Exiting the truck following an electrical strike is extremely dangerous and can be life threatening. Moving with an elevated trailer at any time is prohibited.*
